Skype: https://join.skype.com/invite/l5AKRBL0glHe

Summary

I am a Full Stack Web API programmer with 4 years of experience in the .NET field. I have in-depth knowledge of web application and API development, ensuring system security and scalability. With the ability to work independently and in a team, I have participated in the successful design, construction, and deployment of software projects both domestically and internationally.

I have the ability to analyze requirements and understand the software development process. I have the capability to quickly research and learn about new technologies and apply them effectively to my work. With my experience and skills, I will contribute and bring added value to any software project.

Technical Skills

Programming Languages: JavaScript & TypeScript, C#
Frameworks/Platforms:

- Angular 2+, VueJS, jQuery
- Twitter Bootstrap, Bootstrap 3+, MaterialUI
- ASP.NET MVC, WebAPI, Entity Framework, EF Core, GUI WPF, ABP Framework
- xUnit, NUnit Framework

Database Management Systems: Oracle SQL, MS SQL Server, MySQL
Khác:

- Proficient in Git version control system for software development projects.
- Experienced in developing and deploying RESTful Web API services.
- Utilize Entity Framework to work with databases in Web API applications, optimizing queries.
- Familiarity with Test-Driven Development (TDD) methodology and ability to write unit tests using the Test Fixture and Test Doubles pattern.
- Strong understanding of Object-Oriented Programming (OOP) principles, SOLID principles, and several Design Patterns when building and developing projects.
- Basic knowledge of authentication and authorization in Web API applications using technologies such as JWT (JSON Web Tokens) or OAuth.
- Basic understanding of microservices architecture and the ability to build distributed applications.

Phone: (+84) 353072938 / Email: phuhuy.hnm@gmail.com

Skype: https://join.skype.com/invite/l5AKRBL0glHe

- Excellent teamwork skills, effective communication, and problem-solving abilities.

Professional experience

Hachinet IT Staffing Service - IT Staffing Specialist 07/2020- Now

---

1. **RJ Travels & Tours (United States) - Engineer Developer 01/2023 - Now**

   Project: RJ Travels (5 members)

   - **Description**: An web application used by the company's system to manage services for Sea Tours, Railway Tours, Resort Vacations, and professional customer care.
   - **Technologies**:
     - Front-end project: Angular 16 + Vex template (Material Design Admin Template)
     - Backend: ASP.NET Boilerplate (ABP) Framework, MS SQL Server
   - **Responsibilities:**
     - Collaborated with the team to understand the requirements of the RJ Travel project and ensured that the requirements were accurately and completely understood.
     - Utilized Angular 16 and customized Vex template to design and develop the user interface for the RJ Travel web application, providing a good user experience and an attractive interface.
     - Used the ASP.NET Boilerplate (ABP) Framework to build modules for WebAPI services to manage travel sales, customer care, and other features of the RJ Travel application.
     - Designed and implemented the database for the RJ Travel application, including creating tables, relationships, and writing necessary queries.
     - Employed Git for source code management and collaborated with team members effectively.
     - Conducted unit testing to ensure stability and quality.
     - Resolved issues and performed maintenance throughout the development and construction of the application.

---

2. **ARENT Inc. (Japan) - Engineer Developer 08/2021 - 12/2022**

   Project: Lightning BIM (10 members)

   - **Description**: This is a powerful software solution, specially designed for the Revit platform. With seamless integration within the 3D working environment, this product offers a completely new approach to creating and optimizing steel layouts in construction projects.

Nguyễn Phú Huy (Huy Warrior) - Full Stack .NET Software Engineer
Phone: (+84) 353072938 / Email: phuhuy.hnm@gmail.com
Skype: https://join.skype.com/invite/l5AKRBL0glHe

- **Technologies**:
  - Programming Languages: C# 9.0+
  - Frameworks/Platforms: .NET Framework 4.7.2, WPF
  - Integration/APIs: Revit API
  - Environment : Revit 2020 and more
- **Responsibilities:**
  - Worked with the development team and the project manager (PM) to understand the requirements of the Lightning BIM project through discussions, exchanges, and clarifications.
  - Adhered to the work plan following the Scrum process and utilized the YouTrack tool to manage tasks, track progress, and execute assignments as assigned by the PM.
  - Engaged in technology research (WPF, Revit API) to interact with the Revit software, build UI, and develop features and modules for the project, such as:
    - Automatic creation of steel structures
    - Smart control system to flexibly move steel reinforcement within technical structures
    - Detection, highlighting, and alerting of collisions in steel reinforcement information
    - Creation of sectional views for multi-directional technical drawing components based on a 6-face cube
    - Contributed to the software version development following the principles of "Semantic Versioning."
  - Implemented the database for the Lightning BIM software, including storing information about reinforcement work, documentation, and version management using the "Extensible Storage" feature.
  - Utilized Git or other version control tools to manage source code and collaborate with team members.
  - Conducted unit testing and utilized the "NUnit Framework" and GUI tool "Revit.TestRunner" to ensure the stability and quality of the Lightning BIM Automatic Reinforcement software.
  - Handled bug fixes and optimized the reinforcement testing process.
  - Participated in the maintenance and bug fixing phase after deployment.

---

3. **Bkav Corporation - Full Stack Developer** **01/2021 - 07/2021**
   Project: eGOV (30 members)

- **Description**: E-Government Electronic Document Solution: An electronic document solution for e-Government that enables easy, efficient, and secure management and processing of documents. It facilitates quick creation, storage, retrieval, and sharing of documents. The system incorporates an intelligent document management feature for automatic document classification. It offers a user-friendly interface that is compatible with mobile devices. Strong security measures ensure information confidentiality. It supports collaborative workflow processes, enhancing the management and processing of e-Government documents. The solution contributes to the development of an advanced electronic government system that serves the community.
- **Technologies**:
  - Programming Languages: C#, Javascript, MySQL
  - Frameworks/Platforms:
    - WebAPI in ASP.NET MVC5
    - BackboneJS, Bootstrap 4
    - Entity Framework 6
- **Responsibilities:**
  - Analyzed project requirements and conducted research to design, build, deploy, and develop modules and new features within the project.
    - Created and managed electronic documents, tracking their processing workflow.
    - Implemented authentication and access control mechanisms.
    - Built and managed workflow processes.
    - Assigned and approved tasks within the system.
    - Provided interactive and customizable features on the user interface to meet user requirements.
    - Participated in research and utilized new technologies such as BackboneJS as the front-end framework and relevant libraries to efficiently interact with the ASP.NET MVC5 WebAPI platform.
  - Conducted testing and bug fixing to ensure stability and quality.
  - Optimized source code and improved application performance.
  - Supported other team members and contributed ideas throughout the development process.

---

4. **MobiFone Corporation - Full Stack Developer** **09/2020 - 06/2021**
   Project: eContract (10 members)

Nguyễn Phú Huy (Huy Warrior) - Full Stack .NET Software Engineer

Phone: (+84) 353072938 / Email: phuhuy.hnm@gmail.com
Skype: https://join.skype.com/invite/l5AKRBL0glHe

- **Description**: Advanced eContract Solution is an advanced electronic contract solution that optimizes the contract signing process. With its safety, speed, and convenience features, eContract reduces time, effort, and paperwork. Online transactions are made easy, allowing users to sign and share contracts anytime, anywhere. By integrating digital authentication, eContract ensures both security and legal compliance.
- **Technologies**:
  - Programming Languages: C#, Javascript, MS SQL Server
  - Frameworks/Platforms:
    - ASP.NET MVC5
    - jQuery, Bootstrap 4
    - Entity Framework 6
- **Responsibilities:**
  - Familiarize yourself with the eContract project and gain knowledge about functional requirements, contract signing processes, and desired features to be developed.
  - Participate in requirement analysis and understand the features to be implemented in the next version of eContract.
  - Execute and adhere to the work plan using the Kanban method to manage tasks and track project progress.
  - Implement the eContract software on the .NET platform, utilizing the C# programming language and ASP.NET framework.
  - Develop key features of eContract, including:
    - User information management
    - Contract management: View and edit contracts, handle contract status and notifications
    - Document management: Upload, store, and categorize documents
    - UI: Build layouts, interactions, event handling, data formatting, and display
    - Digital authentication: Manage digital certificates and electronic signatures, ensure security and access control
    - Statistics and reporting: Collect and process statistical data, display statistics and reports
    - Notification and reminders: Send and receive notifications within the system, via email or messaging
    - Session management: Track activities and monitor work sessions
  - Develop a user-friendly interface, work with queryable databases, and store contract-related data

5. **Deha Viet Nam - Front Developer** **07/2020 - 09/2020**
   Project: Supplier Relationship Management (6 thành viên)

DFT CMS Service Company - CMS Developer 06/2018 - 06/2020

---

1. **Thịnh Phát Portal - Backend Developer** **11/2018 - 06/2020**
   Project: FinPortal (8 members)

---

2. **MobiFone Corporation - FullStack Developer** **06/2018 - 10/2018**
   Project: Mobifone Customer Portal (8 members)

---

ezCloud Global - FullStack Developer 11/2016 - 06/2018

Project: ezFolio (10 members)

Education

University of Civil Engineering (NUCE) **09/2013 - 03/2018**

Studying IT majoring in Software Engineering - Bachelor's Degree Program
